

Temple-Inland

To Temple-Inland Customers:

Temple-Inland has never imported any gypsum wallboard from China.

Our full line of gypsum products is manufactured at facilities that we own and operate in the United States under our high quality standards. We have a long history in this industry and have never received any complaints similar to the ones currently in the news attributed to Chinese wallboard.

We appreciate your business and share your commitment to quality. For more information about our gypsum products, please visit our website at www.templeinland.com.

Temple-Inland has conducted extensive third-party indoor air quality testing for sulfur and volatile organic compounds (VOCs). Results indicate that gypsum products from Temple-Inland manufacturing facilities are negative for sulfur off-gassing and are not considered problematic corrosive drywall types. VOCs (including formaldehyde) are certified as low-emitting in accordance with California standard section 01350 which are LEED and Collaborative for High Performance Schools (CHPS) compliant.

Sincerely,

Vice President, Gypsum & Fiber Products
